

1. Downloading VS code and Setup

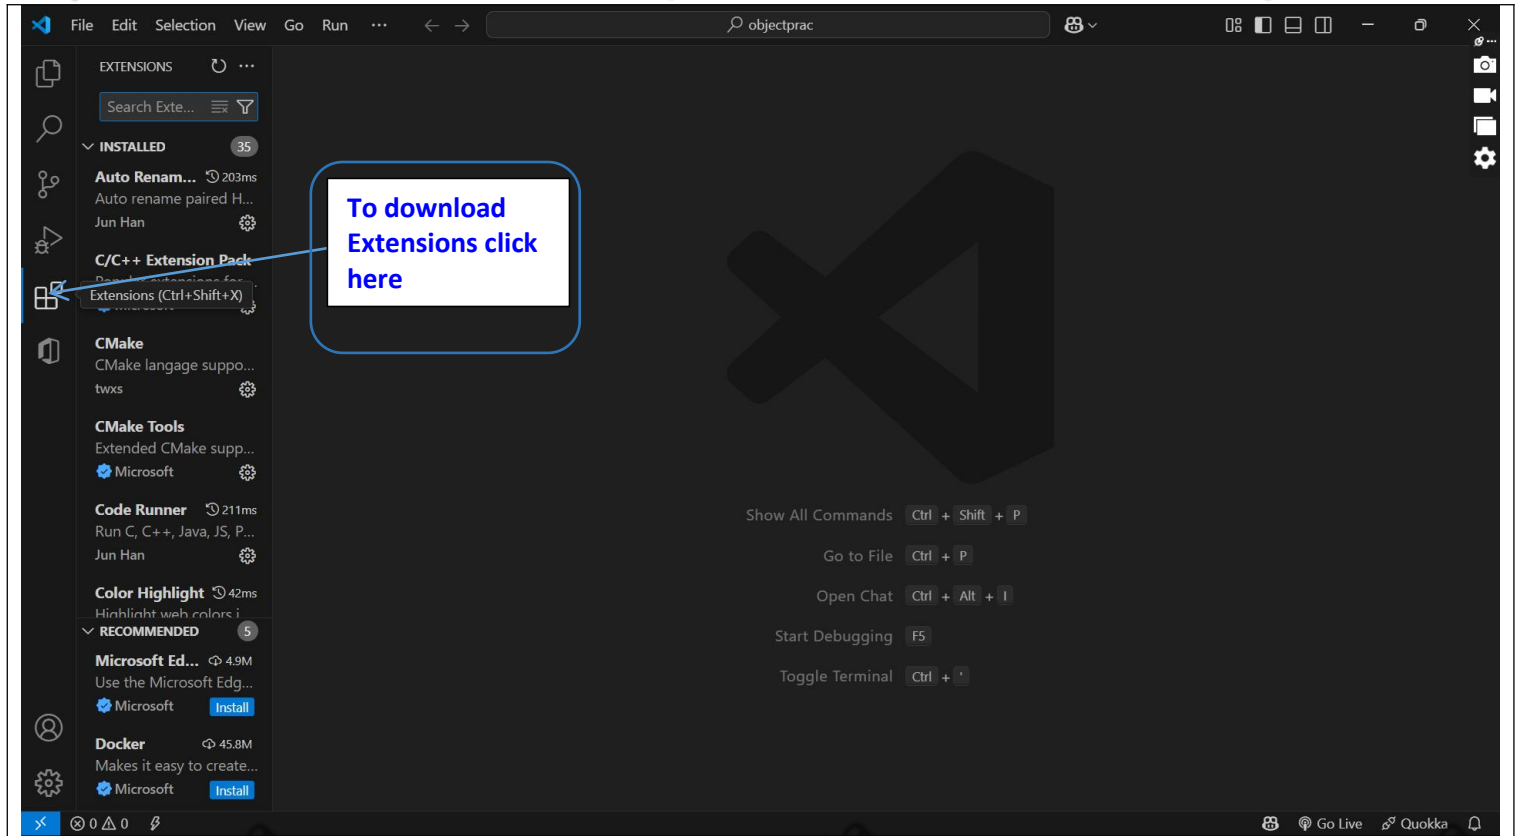

2. Create and Open Folder/Files in VSC

2. Install VSC Extensions.

- Here is a list of VSC extensions (add extra feature to VSC) you must install:

🌐 Open in Browser (TechER)

With just one click, this extension opens your HTML file directly in your default browser—fast and effortless!

💧 Live Server (by Ritwick Dey)

Launch a mini web server on your computer! Every time you save your HTML or CSS, the page updates *automatically*. No need to refresh—it's like magic for web developers!

⚙️ Material Icon Theme (by Philipp Kief)

Give your VS Code a stylish upgrade with beautiful icons based on Google's Material Design. Files and folders are easier to recognize at a glance.

⚡ Prettier (by Prettier)

Let your code shine! Prettier formats your HTML, CSS, or JavaScript to look neat and clean, without you lifting a finger.

Auto Rename Tag (by Jun Han)

Change an HTML tag? Its pair changes too—instantly. Saves time and prevents errors when editing elements.

CSS Peek (by Pranay Prakash)

Hover over a class or ID in your HTML and instantly preview the related CSS. It's like having X-ray vision for your styles!

Bracket Colorizer (by CoenraadS) *(Deprecated)*

Makes matching brackets pop with color! Although VS Code now includes this by default, it's still a handy classic.

Indent Rainbow (by Odewart)

Colors each level of indentation, making it super easy to spot where your code lines up—or doesn't.

JS JSX Snippets (by Nai You Run)

Need some JavaScript or React code fast? This extension gives you ready-made pieces to speed up your development.

- ✓ **All these extensions will work as soon as you install them, but “Prettier” requires one more step in the settings. I'll show you step by step how to set it up.**

Step 1:

The screenshot shows the Visual Studio Code interface with the 'Prettier - Code formatter' extension page open. The left sidebar lists several extensions, with 'Prettier' selected. The main area displays the extension's details, including its description, supported languages, and installation options. A callout box points to the settings gear icon in the bottom left corner.

Code formatter using prettier
Disable Uninstall Auto Update

Prettier Formatter for Visual Studio Code
Prettier is an opinionated code formatter. It enforces a consistent style by parsing your code and re-printing it with its own rules that take the maximum line length into account, wrapping code when necessary.

JavaScript · TypeScript · Flow · JSX · JSON
CSS · SCSS · Less
HTML · Vue · Angular · HANDLEBARS · Ember · Glimmer
GraphQL · Markdown · YAML

Formatters

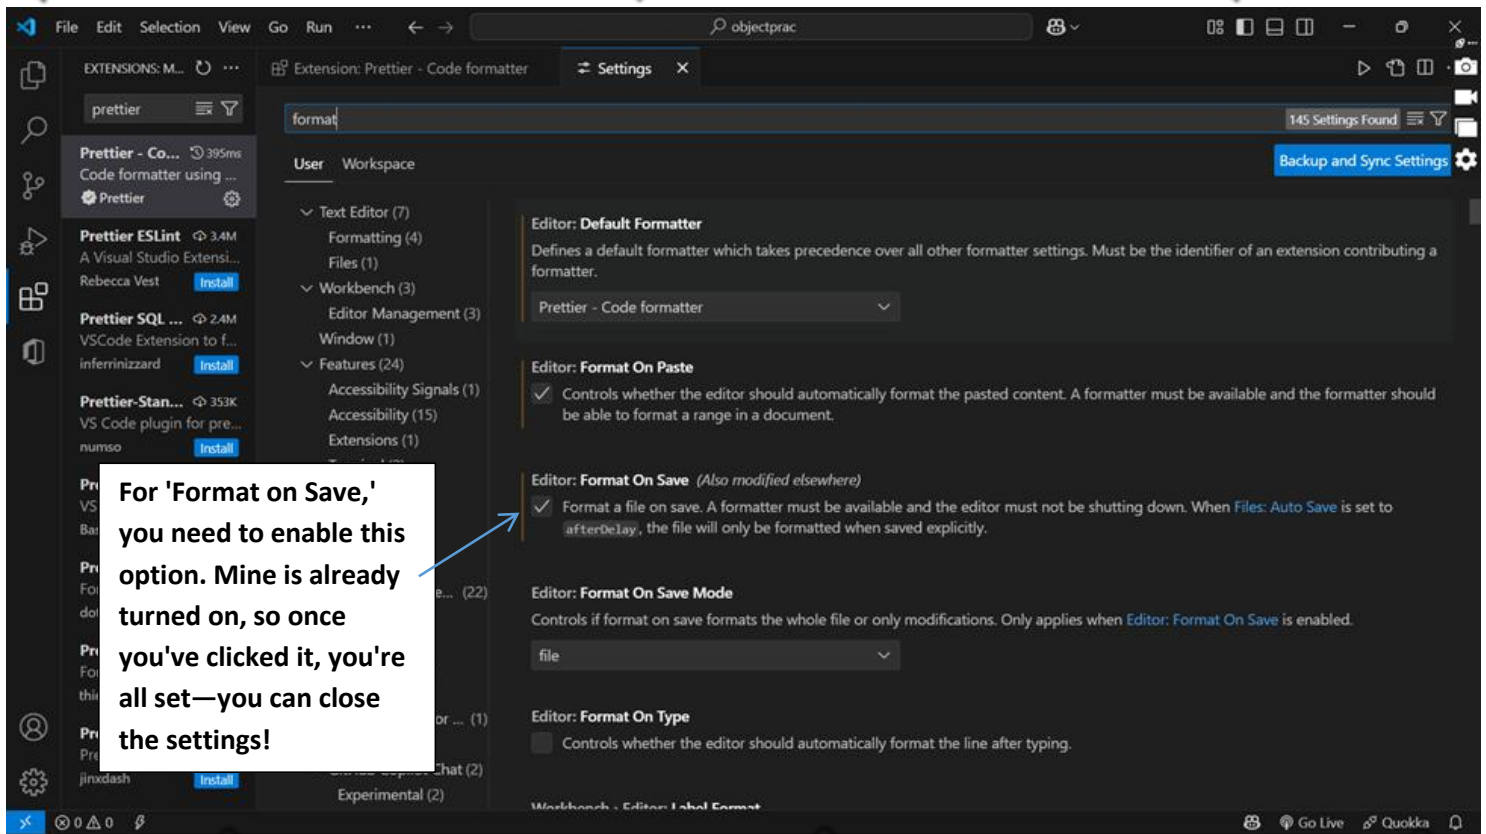

Step 2:

Step 3:

Step 4:

The screenshot shows the Visual Studio Code interface with the Settings window open for the 'Prettier - Code formatter' extension. The search bar at the top of the settings panel contains the text 'format'. The left sidebar shows the 'Extensions' view with a list of installed extensions, including 'Prettier', 'Prettier ESLint', 'Prettier SQL', and 'Prettier-Stan'. The main settings panel is divided into sections: 'Editor: Default Formatter', 'Editor: Format On Paste', 'Editor: Format On Save', 'Editor: Format On Save Mode', and 'Editor: Format On Type'. The 'Editor: Format On Save' section is highlighted, and a blue arrow points to the 'Format a file on save' checkbox, which is checked. A white text box with a blue arrow pointing to the checkbox contains the following text:

For 'Format on Save,' you need to enable this option. Mine is already turned on, so once you've clicked it, you're all set—you can close the settings!

The settings panel also shows a 'Backup and Sync Settings' button in the top right corner. The bottom status bar indicates the current file is 'objectprac'.
